# EDUCATION

## Tecnologico de Monterrey

Guadalajara, Jalisco

Bachelor of Science in Computer Science

Aug. 2020 - May 2024

### EXPERIENCE

### Junior Frontend Engineer

March 2022 - Present

Mis Fans

Zapopan, Jalisco

- Build the new responsive landing page with modern animations using Next.js and Tailwindess.
- Build informative pages such as terms and policies, as well as 404 page.

IT Assistant

September 2018 – November 2018

Volskwagen

 $La\ Paz,\ BCS$ 

- Implemented an inventory system to keep track of the 60+ electronics in the building.
- Managed and kept up to date internal software and hardware for 12 maintenance stations.

#### Projects

### Landing Page for MisFans | TypeScript, Next js., Tailwindess, Git

July 2022 - July 2022

- Created full landing page, featuring animations and mobile user detection
- Component and props based, meaning that the editable elements of the whole page can be changed in a single .tsx file
- Implemented a moving image carousel to display users profiles and in mobile the tools section
- Added a sticky navbar which changes style as you scroll down the page to keep it visible to the user
- The landing page makes use of "scroll to" buttons on the navbar, so navigation for the user is easier and faster
- The page can be seen here

Alerts for streamers | TypeScript, Next js., Supabase, JQuery, Git

May 2022 – June 2022

- Made an alert system to display messages to streamers
- The alert could be displayed in any streaming platform, such as OBS and Streamlabs
- The streamer can choose when to show the alert, since the alert was different for many products
- The alert was made to show any of the nexhttps://www.overleaf.com/project/6134f6240170da16159ea663t options (Subscriptions, donations, greeting requests, questions from donations, and purchase of digital products)
- Had a lot of costumization features, such as duration and gif

**To-Do Web App** | JavaScript, React.js, GitHub Pages, Git

December 2021 – January 2022

- Developed a working ToDo Web App using React.js
- Implemented a search bar to navigate through the existing To-Dos
- Made in an easy to read way using custom hooks
- Saves every To-Do inside of LocalStorage
- Deployed the project making use of GitHub Pages, page can be seen here

Personal Website | React.js, CSS, Firebase, Git

February 2022 – February 2022

- Developed my own personal website used to connect my multiple accounts and provide my CV for anyone to download.
- Implemented the Puppertino framework in order to give a Apple like style to the page
- The website is mobile friendly and can be seen through landscape orientation
- Deployed via firebase to my domain, the page can be seen here

#### TECHNICAL SKILLS

Languages: C++, Swift, Python, JavaScript, TypeScript

Developer Tools: Linux Systems, VIM, CLI, VSCode, Git, Xcode, Docker, GH Pages, Firebase, Vercel

Frameworks & Libraries: SwiftUI, React.js, Next.js, Tailwindcss
